

# HR ANALYS

The dataset has employees` information and company wants to know why some employees voluntarily leave the company.

The data has 'age, attrition, business travel, job satisfaction, environment satisfaction' and other columns those help us to find reasons. Before visualize it, we need to do transform the data.

Firstly, we remove ‘over18’ column because all of the employees have to be over 18.

Then we split ‘business travel’ column according to ‘Travel\_’. Since we do not need it after split we can see some null values and we replace them with ‘never’ and rename the column.

- In ‘environment satisfaction’, ‘job satisfaction’, ‘relationship satisfaction’, ‘work life balance’ we need to replace numeric values ’1,2,3,4’ with ‘low, medium, high and very high’ values respectively.
- In performance rating column we do the same thing but replace with different values.

1<sup>2</sup>3 EnvironmentSatisfaction

Create Calculate table(**from home->enter data**) in order to identify measures easily and add **male, female, total employees, total attrition, current employees** measures.

```
1 Total Attrition = CALCULATE(COUNTROWS('WA_Fn-UseC_-HR-Employee-Attrition'), 'WA_Fn-UseC_-HR-Employee-Attrition'[Attrition]="Yes")
```

```
. %Female = DIVIDE('Calculations'[Female], 'Calculations'[Total Employees])
```

```
1 Total Employees = SUM('WA_Fn-UseC_-HR-Employee-Attrition'[EmployeeCount])
```

```
1 Total Attitude Female Workers =  
2 CALCULATE(  
3     COUNTROWS('WA_Fn-UseC_-HR-Employee-Attrition'),  
4     'WA_Fn-UseC_-HR-Employee-Attrition'[Attrition] = "Yes",  
5     'WA_Fn-UseC_-HR-Employee-Attrition'[Gender] = "Female"  
6 )
```

```
1 Female = CALCULATE(  
2     COUNTROWS('WA_Fn-UseC_-HR-Employee-Attrition'),  
3     'WA_Fn-UseC_-HR-Employee-Attrition'[Gender] = "Female"  
4 )
```

At the first stage of visualization, we create some cards to show avg age, total employees, attrition.

TOTAL EMPLOYEE	TOTAL ATTRITION	ACTIVE EMPLOYEES	ATTRITION RATE	AVERAGE AGE
1470	237	1233	16.12%	37

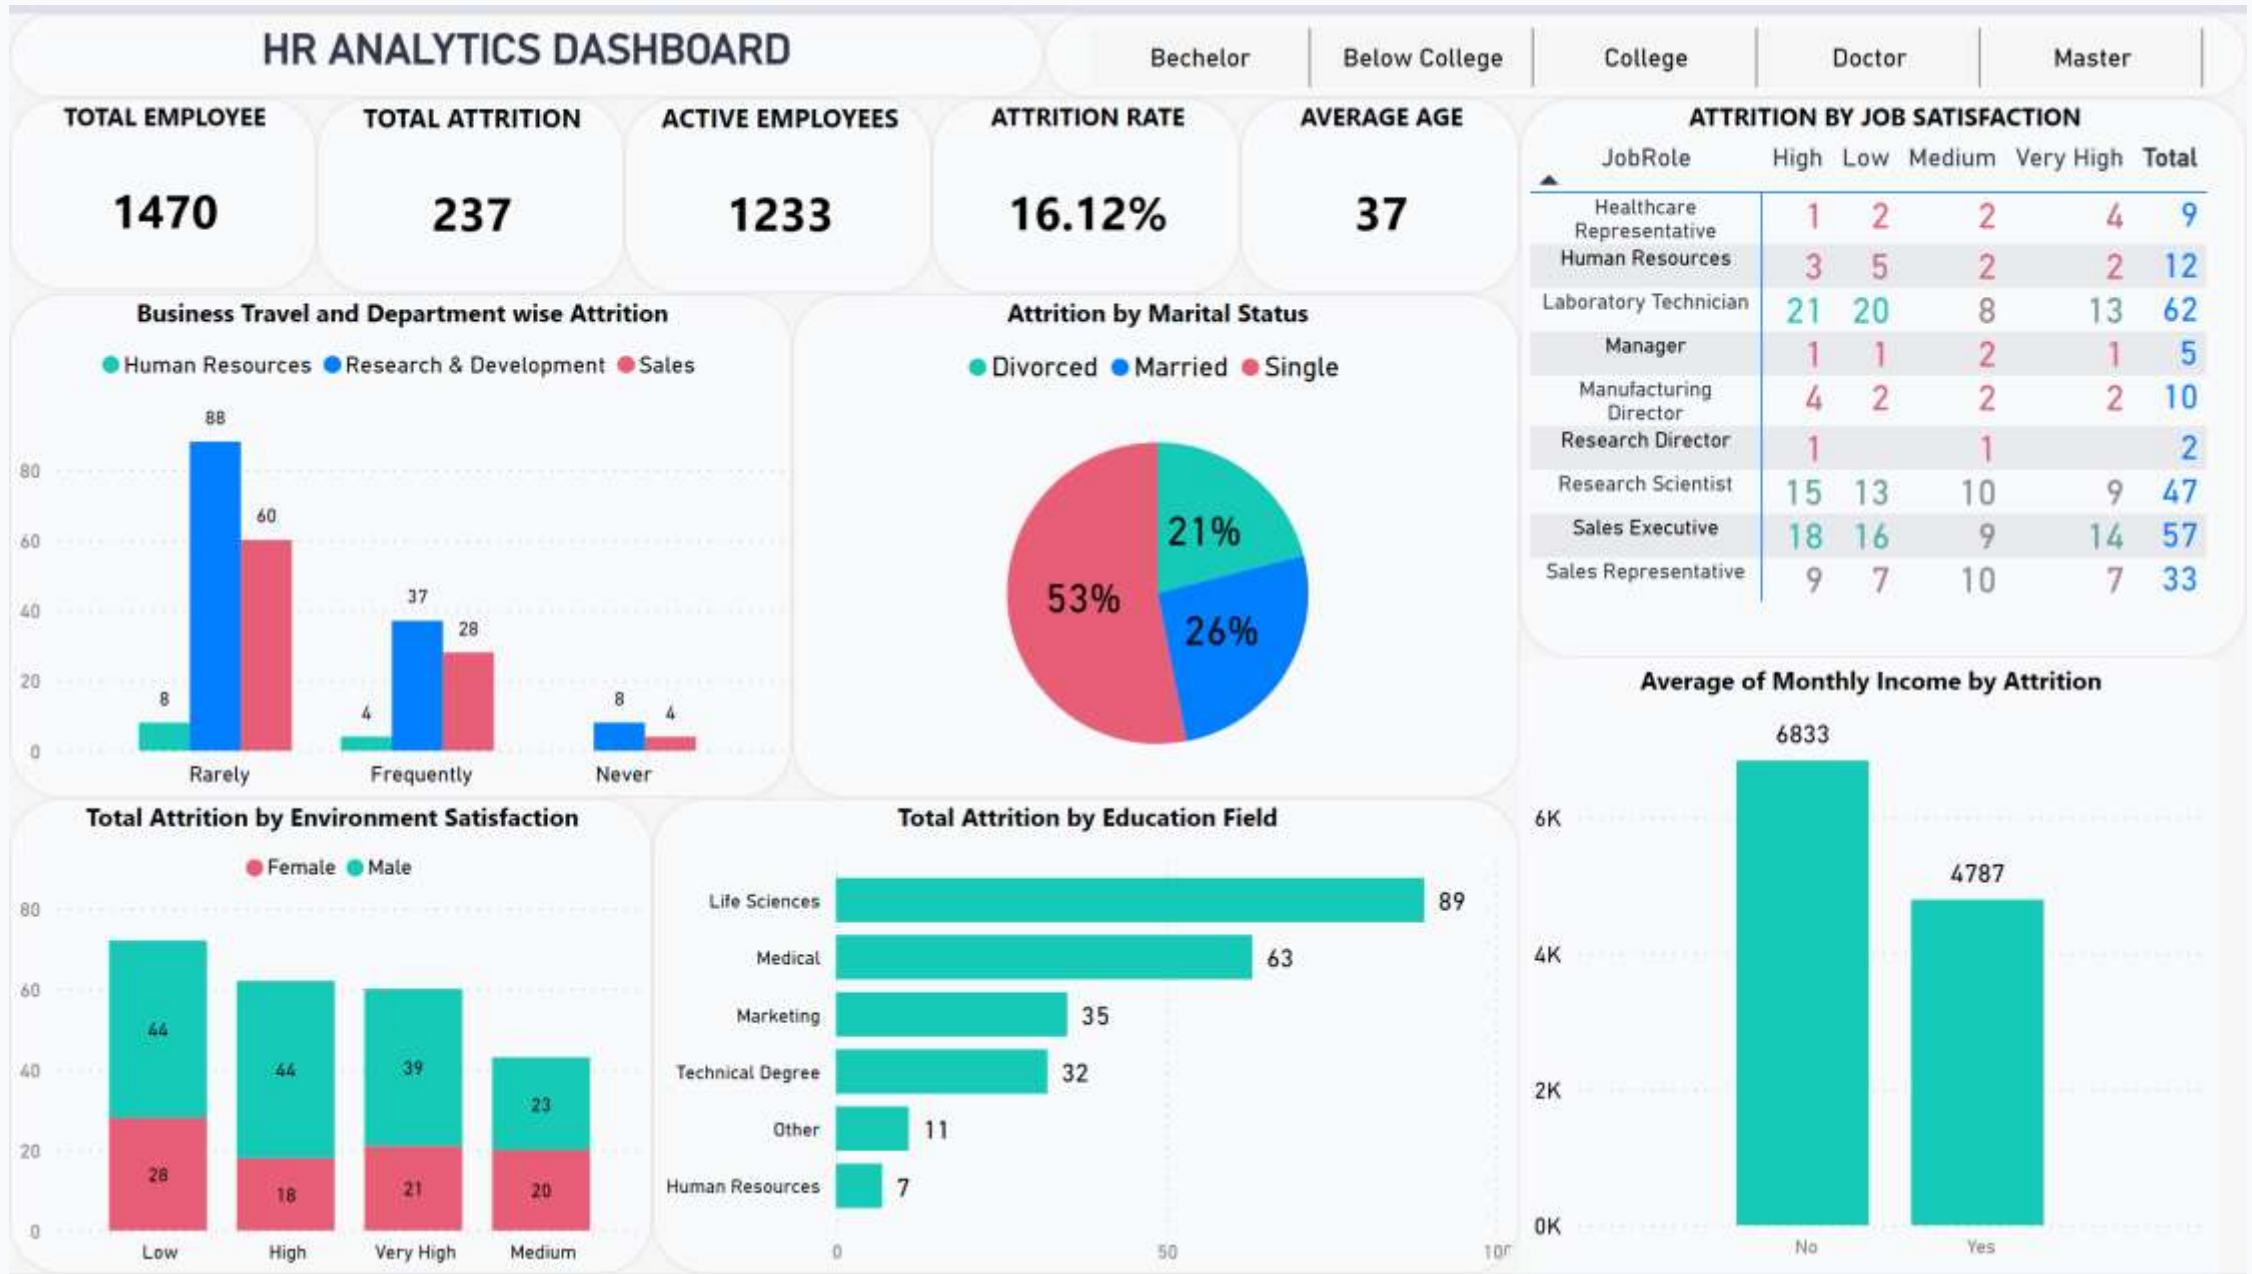

Then create header text, and slicer so as to filter data according to education level.

HR ANALYTICS DASHBOARD				
Bechelor	Below College	College	Doctor	Master

Then make other visualization to show attrition reasons clearly.

# And final report ready!

After that we can publish(**home->publish->choose workspace**) it in Power BI server and create mobile view and dashboard

 **HR REPORT**
